STORAGE
VIOLATIONS**

INTRODUCTION TO IPCS

IPCS can operate in one of three modes :

- TSO terminal line mode
- TSO full screen mode using the services of ISPF Dialog Manager
- Batch mode using TSO IKJEFT01

INTRODUCTION TO IPCS

IPCS can operate in one of three ways. A TSO terminal in line mode. A TSO terminal in full screen mode using the services of ISPF Dialog Manager, or batch mode using TSO IKJEFT01.

```
//P01CEPP JOB (ACCT#),
//          'IPCS BATCH PRINT',
//          CLASS=A,
//          MSGLEVEL=(1,1),
//          MSGCLASS=X,
//          NOTIFY=P01CEP
//IPCS      EXEC PGM=IKJEFT01,REGION=4M
//DFHSDUMP DD DSN=SYS1.CICSTS52.DUMP03,DISP=SHR

USING IPCS

----- IPCS Default Values -----

Command ==>

You may change any of the defaults listed below. The defaults shown before any changes are LOCAL. Change scope to GLOBAL to display global defaults.

Scope ==> **LOCAL** (LOCAL, GLOBAL, or BOTH)

If you change the Source default, IPCS will display the current default Address Space for the new source and will ignore any data entered in the Address Space field.

Source ==> **DSNAME('SYS1.RSMA.DMP00032')**

Address Space ==> **ASID(X'005C')**

Message Routing ==> **NOPRINT TERMINAL**

Message Control ==> **CONFIRM VERIFY FLAG(WARNING)**

Display Content ==> **NOMACHINE REMARK REQUEST NOSTORAGE SYMBOL**

Press ENTER to update defaults.

Use the END command to exit without an update.

----- IPCS Default Values -----

Command ==>

You may change any of the defaults listed below. The defaults shown before any changes are LOCAL. Change scope to GLOBAL to display global defaults.

Scope ==> **LOCAL** (LOCAL, GLOBAL, or BOTH)

Local defaults. These values are currently in use for an ISPF screen in the IPCS dialog, for a batch IPCS session, or for an IPCS interactive line-mode session.

Global defaults. These values are used to establish the local defaults when IPCS processing starts in an ISPF screen, a batch IPCS session, or an IPCS interactive line-mode session

The global defaults are obtained from the dump directory being used. IPCS uses as the global defaults the following, in this order:

1. The last value specified as a global default in a SETDEF subcommand or on the IPCS Default Values panel in the IPCS dialog.

CICS IPCS VERBEXIT

The **VERBEXIT** or **VERBX** command is used to invoke the IPCS routines

The commands can be specified with a level number

- Level 0 Formats no data.
- Level 1 Formats only summary reports
- Level 2 Formats all control blocks for the specified component.
- Level 3 Formats both summary and control blocks for the specified components
